Applicant's election without traverse of Group I, claims 1-7, 14 in the reply filed on 7/2/07 is acknowledged. Applicant has elected laser irradiation for creating a vascular wound. In the IDS received 3/30/06, please provide a complete citation for Fisher et al.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-7, 14 are rejected under 35 U.S.C. 102(a) as being anticipated by Gregory.

Gregory (Blood Cells, Molecules and Diseases) entitled "Genetic Analysis of Hemostasis and Thrombosis Using Vascular Occlusion" teaches on page 287, larvae were immobilized in agarose, anesthetized, and wounded with laser light and the injured blood vessel was observed. On page 289 first column, either veins or arteries may be targeted for laser irradiation injury. On page 291 column 1 mutant zebrafish were tested.

All the features of the claims are taught by Gregory for the same function as claimed.

The abstract of the disclosure is objected to because it is not directed to the presently claimed invention. Correction is required. See MPEP § 608.01(b).

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Serbedzija (6,656,449) teaches screening for agents with zebrafish.

Jagadeeswaran (Methods in Cell Biology) teaches analysis of hemostasis in the zebrafish.
